Survey of Japanese Staff Members Employed in the UN System

Kazuko Yokoyama

Abstract

This paper introduces a survey conducted in 2003 on the career development of Japanese staff members who are employed in the UN System. The survey showed that there is a high representation of Japanese women employed at the UN, contrary to the situation in Japan where the low representation of women at the professional level is conspicuous. This survey also found that highly professional and competent Japanese men and women chose to work for the UN to contribute to the improvement of the society by better utilizing their abilities. They respect values which are difficult to measure in terms of money.

I. Introduction

The number of Japanese who have resided outside Japan for three months or more is expected to reach one million by 2006⁽¹⁾. The larger part of these people are employees of Japanese private companies. However, an increasing number of Japanese work in multinational corporations and international organizations including the United Nations (UN). More young and highly motivated Japanese are willing to take risks in developing their careers through working in an international environment.

Together with one of my colleagues at Toyo Gakuen University in Japan, the writer conducted a survey in 2003 on the career development of Japanese who are employed by the UN agencies. The result of the survey is summarized in Chapter IV of this paper.

II. Precedent Study-Types of multinational corporations

According to a well-known study made by Dr. H.V. Perlmutter in 1969⁽²⁾, multinational corporations are classified into three types, namely, ethnocentric, polycentric and geocentric. In geocentric corporations, staff, irrespective of nationality, is placed in suitable positions anywhere in the world. The organization of the United Nations (UN) is considered geocentric and it aims to maintain world peace, to develop international co-operation, and to promote friendship among the member nations.

It is also noted that the UN is a non-profit organization and that all its costs are borne by Member States, at present totaling 191.

III. Human resources management at the UN

The following outlines several characteristics of personnel management at the UN agencies.

3.1 Nationality of staff members

Staff members are recruited and promoted taking into account the contribution of the member state concerned. This policy is called geographic distribution and is stipulated in article 101 of the UN Charter. The aim of this policy is to avoid imbalanced representation of particular countries in the staff composition. At present the number of nationalities of staff members at the 30 UN agencies is 190. These 30 UN agencies belong to what is called the UN Common System where the conditions of work, salary level and other entitlements are made equal. These 30 agencies are listed in Table 1.

*include major Orgs, Regional Commissions and other Commissions

3.2 Duty stations

One of the major responsibilities of the UN is to promote social and economic development of developing countries. This requires a substantial portion of its staff members to be stationed in developing countries. At present the duty stations assigned to its staff are scattered over 179⁽³⁾ countries, covering 546 cities and villages⁽⁴⁾. In general the staff members are required to work outside their respective home country.

3.3 Promotion/assignment of staff members

In the UN, the process of promotion and assignment of staff starts with each staff member as he or she applies for a higher graded post or a post different from the present one. It is mandatory that all vacant posts in the professional and higher categories be advertised all over the world. If a staff member wishes to get promoted or to expand his or her field of work, he or she must apply for such higher graded posts or other applicable posts by his or her own initiative. If a staff member is satisfied with the present work, he or she can remain at the same post without applying for any vacant posts.

3.4 Working Language

English has been widely used at workplaces in the UN. In some duty stations, French or Spanish is also used in addition to English.

3.5 Salary

The salary in the professional and higher categories is calculated in US dollars and paid in the currency of the staff member's choice. The salary is composed of the basic salary, post adjustment and various allowances such as education grants and housing allowance. The total annual salary is divided into twelve and paid monthly to the staff member concerned. There are no bonuses or other special payments to staff members.

The UN salary structure was established in 1945 based on the one implemented for the Federal Civil Service in the United States. Salaries at the UN are considerably low compared with those at leading Japanese companies.

3.6 Affirmative Action Programs

Affirmative Action Programs have been implemented in the UN agencies to promote the principle of equal rights between men and women and to upgrade the status of women.

As of December 2003, the percentage of women in the professional category is 38 %⁽⁵⁾ and that in the higher managerial categories (D-1 and above) is 22%. The percentage of women

throughout the professional and higher categories is 36%. In order to achieve a parity between men and women, the UN secretariat has been striving to increase the percentage of women to 50%.

As compared to the ratio above, the percentage of women in Japan at the managerial level is quite low. According to a survey of the Ministry of Health, Labor and Welfare, the percentage of women at bucho level (director and above) was only 2.7%⁽⁶⁾, that at kacho level (division head) 5.0% and that at kakaricho level (unit head) 11.0%. According to another survey by the Ministry of Health, Labor and Welfare in 2004⁽⁷⁾, the percentage of women on career track (sogo shoku) was only 3% in the companies which had implemented the employment management system classified by course.

IV. Career survey of the Japanese staff employed by UN agencies

4.1 Target group

It is noted that there are various definitions of a UN agency. Altogether 30 UN agencies in the UN Common System and the World Bank group are included in this research survey.

Japanese staff members whose contract duration was one year or longer were taken into account. Staff members in the professional and higher categories were included in the survey but staff members in the General Service category were excluded.

4.2 Research Method

A total of 25 preliminary hearings were conducted in 2001 and 2002 focusing on those Japanese UN staff stationed in Geneva, New York and Tokyo. Based on these hearings, the question items were prepared for the survey.

4.3 Career survey by e-mail

Mailing a questionnaire to the relevant Japanese staff was originally planned in this survey. However, since the majority of staff members are working in developing countries where the postal service is not reliable, it was decided to conduct this survey by e- mail.

A questionnaire consisting of 57 items both in English and Japanese was sent to 541 Japanese UN staff members employed by 23 UN agencies in June 2003. Prior to dispatching the questionnaire, an e-mail had been sent to 741 Japanese staff members, where an introduction of this survey was made, asking for their cooperation. Then those who turned down participating in the survey or whose e-mail addresses were wrong were deleted from the survey list.

Two hundred fifty staff members from 20 agencies replied to the questionnaire within two months. The response rate was 46% which was considerably high compared with other ordinary

surveys, thanks to the preliminary introduction by e-mail and an e-mail reminder informing them of the response rate by agency.

4.4 Overview of respondents

There were 250 respondents: 119 male, 126 female and 5 not mentioning the sex. However, among the respondents, there were 34 AE/JPOs who are kind of trainees and funded by the Japanese Government, 25 staff members who had been seconded for the UN by the Japanese Government and 21 members under the Young Professional Program (YPP) or under other types of contract.

To grasp the real picture of the Japanese UN staff, the respondents of AE/JPOs, those seconded by the Government and those under other types of contract were excluded from the analysis. In conclusion, 170 Japanese UN staff members financed by the UN and seeking careers within the UN were considered in this analysis. The breakdown of the 170 staff members by sex is: 79 male, 87 female and four not disclosing their sex. 87% of the male respondents were married and in the case of female staff, 54% were married and 43% single.

4.5 Analyses of data

When the data were cross tabulated, it was noted that the biggest difference was brought about by sex. The following analyses were therefore made primarily by sex.

(a) Specialized field of study related to the last degree held:

It was observed that about 60% of Japanese UN staff (men and women) completed either commerce/MBA/MPA or international relations or economics or development studies as the last degree they held. The breakdown among commerce/MBA/MPA showed that more men obtained MBA and more women MPA. As shown in Figure 1, the specialized fields of male staff members were widely spread out: 25% chose commerce/MBA/MPA, 16% economics, 12% international relations, 9% engineering and 8% law. On the other hand, female staff concentrated on more limited fields: 23% chose international relations, 15% commerce/MBA/MPA and 14% development studies.

(b) Grade and age

The average grade of the staff surveyed was P-4. The average grade of the male staff was P-4, step 4 while that of the female staff was P-3 step 5.

The average age of the staff surveyed was 43 years old. The average age of the male staff was 46 while that of the female staff was 39 years old.

(c) Preparations for working in the UN

It is often advised to start one's career planning at an early stage in life. However, only 5% of the respondents decided to work for the UN before studying at high school. 45% of them answered that they had started preparing for joining the UN between their university period and age 29.

The situation is a little different by sex. Only 34% of the male staff started their preparation in their twenties, i.e. upon completion of their undergraduate or post-graduate studies. On the other hand, 45% of the female staff made up their minds to work for the UN in university or graduate school. As a result, 40% of the female staff became regular UN staff in the latter part of their twenties as compared to 22% in the case of the male staff.

(d) Important factors affecting the decision to work for the UN

In this survey, the Japanese UN staff members were asked to choose three most important factors affecting their decision to work for the UN out of ten possible factors listed in Q11 (adaptability/flexibility, specialty/specialties, ability for negotiation, language ability, positive attitude, leadership, work experience in the relevant field of UN activities, experience of having lived overseas, coordination skill with local staff/people, understanding/knowledge of the programs implemented at the UN, and others). A majority of the staff, regardless of their sex, chose adaptability/flexibility, language ability and specialty/specialties.

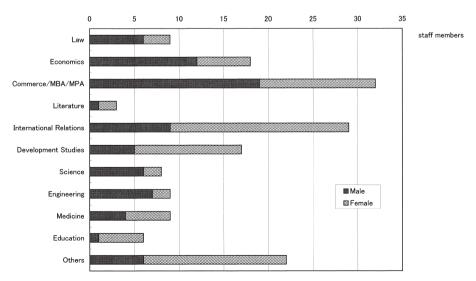

Figure 1 Specialized Field of Study Related to the Last Degree Held

(e) Job satisfaction

Over 80% of the respondents were very satisfied or satisfied with their jobs. As the reasons for satisfaction they cited the substance of the jobs, feeling of accomplishment, contribution to the society, work environment and utilization of their capabilities.

(f) Working hours

77% of the respondents, regardless of their sex, thought that working hours at the UN were about the same or 20 to 30% shorter compared with those at the private companies in their previous employment in Japan.

(g) Salary

To the question what they thought about the level of their salary, 80% of respondents considered that their salary level was average or somewhat high. 53% of the female staff replied that their salary increased upon entry at the UN. As for the male staff, it was difficult to conclude about the decrease/increase as their answers were widely spread out.

(h) Fringe benefits

65% of respondents considered that the fringe benefits at the UN were at a high or very high level. The fringe benefits such as pension, annual leave and education grants at the UN were equal or higher compared with those in leading Japanese companies.

(i) Affirmative action programs

About half of the respondents, both male and female, thought that a large number of women were employed at the UN thanks to the policy of the top management and the affirmative action programs. They also replied that the top management of Japanese companies did not sufficiently value women's contributions and that there was no appropriate environment in Japan for women to execute their work professionally and at the same time carry out their family responsibilities.

(j) Difficulties at duty stations

The respondents experienced on the average 2.4 countries as their duty stations: men 2.5 countries and women 2.3 countries. Staff members must go through the process of various adjustments at each duty station. To the question which element they considered most difficult to deal with among the substance of work, relationships with the local staff, and general matters not directly relating to work such as security and language used at duty stations, 40% of the respondents, both male and female, chose "general matters not directly related to work".

(k) Continuing to work at the UN until mandatory retirement

70% of the respondents expressed their wish to work for the UN until they reach mandatory retirement age. They wished to continue to work because they could continue to use their expertise or because the work environment was very comfortable. Among the other reasons was the difficulty in finding appropriate jobs outside the UN.

Those who would not stick to develop their career within the UN stated that they would be able to better utilize their expertise outside the UN. This does not necessarily mean that they were not happy with the work or treatment at the workplace at the UN. It can be said that the Japanese UN staff have been very active in developing their career outside the UN, if they found good opportunities.

(l) Finding a job in Japan

A quarter of the Japanese staff has thought seriously of returning to Japan. The reasons why they wanted to return to Japan and to find a job there were that they needed to look after aged parent(s) back in Japan or that they could not go along with their boss. However, these people did not actually resign from the UN because they could not find a suitable job in Japan or could not make the final decision as the work environment in Japan was so different from that at the UN.

(m) Current concerns

The current major concerns of the Japanese staff employed at the UN are promotion/career development, care of aged parent(s) and education of children. It was noted that the male staff were more concerned about the education of children and life after retirement than the female staff.

V. Discussion

Working at the UN requires a high level of education and professional work experience. Over 80% of the respondents had work experience in Japan before being employed by the UN. Their primary motives for joining the UN were to use their specialization, to contribute to the development of developing countries and to work with people with different cultural backgrounds.

The survey revealed the following facts:

5.1 Composition of staff

Among the Japanese staff employed by the UN agencies, women represented 52% and men

48%. This ratio of female staff is significantly high as compared to the percentage of 36% at the 30 UN agencies as a whole. It must be noted that the high level of representation of women at the UN has been realized by the continuing efforts of the top management over 30 years.

The even higher representation of women among the Japanese UN staff may be attributed to the affirmative action programs implemented at the UN. In Japanese companies, the percentage of women on the career track (sogo shoku) where the employment management system classified by course has been implemented was only 3%. This may also mean that Japanese companies have not utilized women's abilities fully at the professional level and that highly competent Japanese women have chosen a career at the UN to make good use of their expertise.

5.2 Career Development

As explained earlier, women's specialized fields according to the last degree they held are concentrated in international relations, development studies and MPA. On the other hand, men's specialized fields are widely spread among business administration, international relations, economics and engineering. This may result in more opportunities for men to apply for vacant positions than for women.

5.3 High level of satisfaction

As stated earlier, both male and female Japanese staff have a high level of job satisfaction. This basically derives from the substance of the job and the feeling of accomplishment and contribution to society. It would be difficult to evaluate these values in terms of money.

VI. Conclusion

About an equal number of Japanese men and women are employed at the UN. The present survey revealed that about half of the respondents chose to work for the UN after having worked in private companies in Japan. Most of them changed their jobs in order to contribute to the improvement of society by better utilizing their abilities. They emphasize those values, which are difficult to measure in terms of money. Salary was not the primary element attracting highly professional and competent Japanese.
